                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAW97235
            The present sequence represents a human type ligand fragment. It

CC is used in the course of the invention. The specification describes

CC an agent for modulating prolactin secretion which comprises a

CC ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR)

CC protein. The agents for promoting prolactin secretion can be used for

CC treating or preventing hypocovarianism, genecyst cacogenesis, menopausal

CC syndrome, euthyroid or hypometabolism. They can by used for promoting

CC lactation in a domestic mammal and as an aphrodisiac. The agents for

CC inhibiting prolactin secretion can be used for treating or preventing

CC pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease,

CC prolactinoma, infertility, impotence, amenorrhea, galactorrhea,

CC acromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome,

CC Forbes-Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia.

CC The inhibitory agents can also be used as contraceptives. The agents for

CC modulating placental function can be used for treating or preventing

CC choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
     This is the amino acid sequence of the human pituitary G
protein coupled receptor ligand 19P2L. A method suitable for
CC commercial high-level production of 19P2L comprises expressing
the ligand in host cells as a recombinant fusion protein e.g. with
human basic fibroblast growth factor (see AAV83796-97) that has
been modified to include an N-terminal cysteine residue. The
CC been modified to include an N-terminal cysteine residue of
CC ligand is released from the fusion by cyanylation followed by
CC ammonolysis. 19P2L has prolactin secretion-stimulating and (at
high doses) prolactin secretion-inhibiting properties. It can be
CC used in the treatment and prevention of various diseases including:
CC senile dementla, cerebrovascular dementla, and dementia associated
CC with: genealogical disorders (e.g. Alzheimer's disease, Parkinson's
CC disease, Pick's disease, Huntington's disease), infectious diseases
CC (e.g. Creutzfeldt-Jakob's), endocrine or metabolic disease or
CC diseases (e.g. hypothyroidism, vitamin Bl2 deficiency, alcoholism,
CI intoxication by drugs, metal and organic compounds), tumourigenic
CC diseases (e.g. brain tumour), traummatic diseases (e.g. chronic
CC diseases (e.g. brain tumour), traummatic diseases (e.g. chronic
CC subarachoidal heamorrhage, and other types of dementia, depression,
CC hyperactive child syndrome (microencephalopathy) and disturbance of
CC consciousness. It is also useful for prevention and treatment of
CC diseases associated with prolactin hypo and hypersecretion
CC breast cancer, infertility, impotence and autoimmune disease
CC hyperactive child syndrome; and seminal vesticle hyponiasia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

Title: US-09-446-543A-73_COPY_3_21
Perfect score: 96
Sequence: 1 DINPAWYXXRGIRPVGRFX 19
Scoring table: BLOSUM62 Gapop 10.0 , Gapext 0.5
Searched: 105224 seqs, 38719550 residues
Total number of hits satisfying chosen parameters: 105224
Minimum DB seq length: 0
Maximum DB seq length: 2000000000
```

Database: SwissProt\_40:\*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

                                                          DNA to the beginning of gene 4.7;

J. MOL. BIOL. 148:303-330(1981),

-:- FUNCTION: ENDODEOXYRIBONUCLEASE I, WHICH IS EXPRESSED IN THE LATE STAGE, IS NECESSARY FOR T7 GENETIC RECOMBINATION AND THE BREAKDOW OF HOST DNA. IN THE EARLY STAGE OF INFECTION, T7 DNA REPLICATES A LINEAR MONOMER. IN THE LATE STAGE, THE T7 DNA REPLICATES VIA LINEAR CONCATEMERS SEVERAL GENOMES IN LENGTH. THE GENE 3 PRODUCT HAS ALSO BEEN IMPLICATED IN THE MATURATION OF THESE CONCATEMERS.
-!- CATALYTIC ACTIVITY: Endonucleolytic cleavage to 5'-phosphooligonucleotide end-products.

N-CADHERIN NEURONAL RECOGNITION MECHANIS.
SUBCELLULAR LOCATION: Type I membrane protein.
SIMILARITY: CONTAINS 5 CADHERIN DOMAINS.

"Structure of the human n.cadherin gene: YAC analysis and fine chromosomal mapping to 18q11.2.";

Genomics 22:172-179(1994).

-1- FUNCTION: CADHERINS ARE CALCIUM DEPENDENT CELL ADHESION PROTEINS.

THEY PREFERENTIALLY INTERACT WITH THEMSELVES IN A HOMOPHILIC MANNER IN CONNECTING CELLS; CADHERINS MAY THUS CONTRIBUTE TO THE SORTING OF HETEROGENEOUS CELL TYPES. N-CADHERIN MAY BE INVOLVED I
